Sponsorship

hack

What is hackSheffield?

Since 2016 we've been organising hackathons for students in Sheffield, supported by companies big and small.

What's a hackathon?

A hackathon is a 24 hour coding competition, where people work together in teams of 2-4 to bring an exciting idea to life.

Each autumn we organise a 200-person hackathon, attended by students from Sheffield and accross the country.

Why not find out what sponsoring us can do for your company?

Why sponsor us?

How can I benefit from sponsorship?

Recruit for internships or graduate schemes

Speak to our attendees about their career plans, and show them how your company can help.

At hackSheffield 5, Egress (a UK-based security software company) spoke to attendees about their graduate jobs at their nearby Sheffield office.

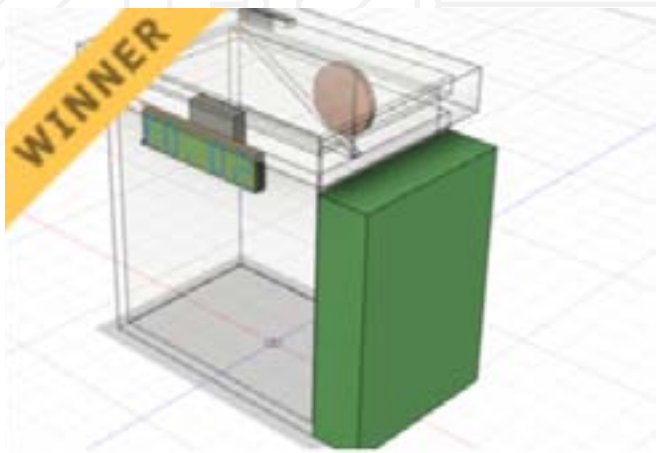

Get real feedback on your products

Put your product or API in the hands of developers and watch them build.

Our attendees are looking for exciting new technologies to incorporate into their projects. By hosting a workshop introducing your product, you can encourage attendees to use it, and then collect in-person feedback from them.
